

We Stand For

QUALITY

Always Have. Always Will.

Our manufacturing process offers more innovation and better technology than any other remanufactured engine company in the world:

- In-house reclamation and cleaning.
- Robotic automated cleaning.
- Modern material handling with automated delivery system.
- Six CNC horizontal machining centers, Mori Seiki, Mitsu Seiki & LaBlonde Makino.
- Two Gehring CNC honing.
- Junker CNC crankgrinder.
- Gehring Line Hone.
- RMB CNC Cam boring.
- Gidding & Lewis High Accuracy Coordinate Measuring Machines (CMM)
- Hommel Turbowave 8000 - the latest surface finish measuring equipment.
- PAT Gauge Incometer - most accurate instrument for cylinder bore measurement.
- AtlasCopco - DC-Torquing of critical fasteners.
- Cold Dyno spin testing - oil pressure, oil flow, compression and torque.
- ISO-9002, ISO/TS16949, ISO-14000.
- Six Sigma Quality Process.

Remanufactured Engines

As a buyer of replacement engines, you know how important quality is. Better quality means less down time and less warranty hassles. Better quality is just a better deal.

We offer high-quality engines that exceed industry standards with “same-as-new” performance. Our reputation is built on principles that have made us a world leader in the engine remanufacturing industry.

The quality of our engine product is actually even visually apparent. When you see one of our engines for the first time, you'll understand what we mean.

People who know engines, notice the difference between our products and the

ones they've seen before immediately upon visual inspection.

Why is this? It's simple, really. Sometimes quality is hard to hide. We build a better engine and it shows – even before you put it in the vehicle.

The single factor that separates a great engine remanufacturer, like us, from a merely good one is manufacturing technology. We've spared no expense in this important area. Simply put, if you want to see the highest-technology equipment, the most intelligent engineering and the best practices in engine remanufacturing today, all you need to do is visit one of our plants where we remanufacture hundreds of

reliable engines per day.

This commitment to manufacturing technology allows us to build the best remanufactured engines anywhere. No one builds a better engine than we do.

Everyone knows quality means reliability. That is why our customers are so loyal. We build a better engine. They install it – and forget it. Do this enough times and you'll find that you wouldn't buy another engine from anyone else – or even let them give you one! The powerful growth of our company is due to the fierce loyalty of our customers. And this loyalty we prize is due to our product's reliability – consistent quality every time.
